

## New additions to One Touch Fastener Lineup

**NEW**

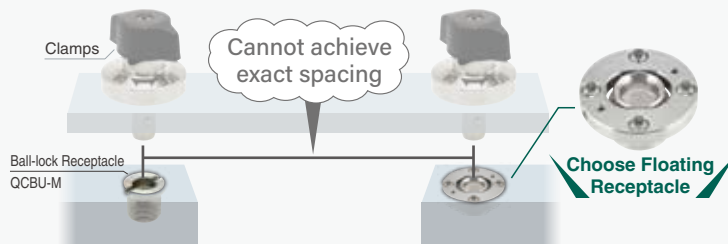

### Floating Receptacles Expand Your Mounting Options

The floating mechanism expands the tolerance range for hole spacing and ensures secure mounting.

**Ideal for Applications Where:**

- Achieving the standard hole spacing on an assembled base is impossible.
- Precise hole spacing on a welded frame cannot be accomplished. Such misalignment can be avoided with Floating Receptacles. Floating Receptacles eliminate such misalignment and costly rework.

Example: Mounting on separate two locations

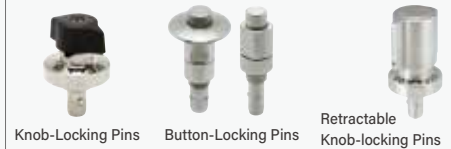

Built-in slider compensates for misalignment

Moves 1mm on each side

### Compact Flat Quarter-Turn Clamps with Smaller Design, Same Reliable Performance

Ultra-compact  $\phi 28$ mm diameter version is added. No protruding knobs or body components.

Perfect for Tight Spaces: The smaller and flat design is ideal for applications in limited spaces, allowing easy integration into compact environments.

A simple quarter-turn with a hex wrench delivers effective clamping with a force of 60N.
